

Web Deploy to IIS From Visual Studio 2013

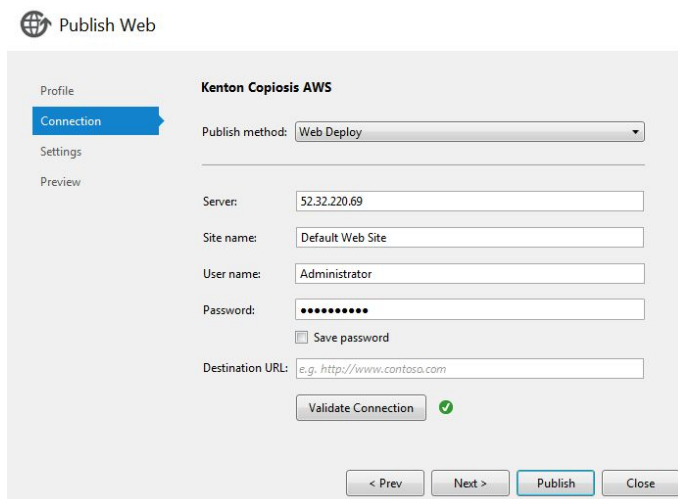

1. From the Build menu, to go “Publish Copiosis_Application”

2. Publish profiles for Chico and Kenton should already be available from the project folder. Under Preview, choose which profile to deploy to. (Eg, Chico or Kenton.)

3. Go to “Connection” and enter the Administrator account password. Press “Validate Connection” to verify. (Leave “Save Password” unchecked for security.)

4. Go back to Preview, click on “Start Preview” to verify that build and transfer will be successful. Then click on “Publish.”
